SIDING

BEAUTIFUL. DURABLE. ENERGY EFFICIENT.
CHAMPION SIDING SYSTEMS
HAVE YOUR HOME COVERED.

**CHAMPION WINDOWS
AND HOME EXTERIORS™**

A HOME LIKE YOURS DESERVES SIDING LIKE OURS

At Champion, making your home as beautiful and efficient as possible is our main goal — that is why our siding is lighter, stronger and engineered to last for the life of your home.

Every style of Champion siding is maintenance-free, and available in a wide variety of vibrant, fade-resistant colors, backed by our industry-leading Limited Lifetime Warranty†.

With a track record of satisfied homeowners nationwide that spans over five decades, you can be confident that when you choose Champion siding systems, you are making the best decision for your house — and the family that calls it home.

7 SIGNS THAT YOU NEED NEW SIDING

Your old siding may be doing more harm than good. So how do you know when it is time to replace it? Here are seven signs:

1 CRACKED, WARPED OR ROTTING SIDING

These signs might seem obvious, but even small cracks could point to larger problems. Give your home a thorough visual inspection. Spot any rot beneath cracked or warped areas? It is time to call in a professional.

2 BLISTERS OR BUBBLES ON YOUR SIDING

If you spot blisters or bubbling beneath the surface of your siding, take note! This means water has gotten trapped within the siding, and you officially have a moisture problem.

3 MOLD OR MILDEW ON YOUR SIDING

Be wary of mold or other kinds of growth that appear on your siding, particularly near the seams. They need moisture to grow, which means water could be penetrating your siding.

4 SEVERELY FADED SIDING

When siding loses its color and becomes severely faded, this is a sure sign that its weatherproofing is

also on its last leg. Your siding is not suddenly useless, but it is a good time to consider upgrading before more serious problems occur.

5 SIDING IN NEED OF FREQUENT PAINTING

Most homes require a fresh coat of paint every 8-10 years. If you find yourself repainting more frequently (say, every 3-6 years), the problem may not be the paint, but the siding underneath.

6 HIGHER ENERGY BILLS

The main purpose of siding is to help your home retain heat and cold, insulating it from the elements year-round. Old or damaged siding does not insulate well, and that will be reflected in your energy bill.

7 PAINT PEELING INSIDE YOUR HOME

Sometimes bad siding outside your home reveals itself inside your home. Do you notice any loose wallpaper or peeling paint? If moisture is getting through your siding and into your walls, it can cause significant damage.

SEASON AFTER SEASON, VIBRANT COLORS THAT LAST A LIFETIME

Champion siding systems offer a wide selection of colors to give your home's exterior the exact look you want. To keep that look true and fresh throughout the years, our siding features Chromatix™ fade-resistant technology — ensuring your color stays beautiful for the life of your home.

When choosing the right color for your siding, here are some things to consider:

YOUR HOME'S ARCHITECTURE

Pay attention to your home's design—a colonial might warrant traditional hues, while a modern house could go bolder.

YOUR NEIGHBORHOOD

Choose a color scheme that will be unique to your home, but also blends well with the overall vibe of your neighborhood.

THE SIZE OF YOUR HOME

Color swatches cannot give you the whole picture. Just remember: dark colors for features you want to highlight; light colors for those you would like to minimize.

THE COLOR OF YOUR ROOF

For siding and roofing that work harmoniously together to up your curb appeal, choose contrasting colors.

YOUR WEATHER

The more intense the sunlight, the brighter colors will appear. So keep your climate in mind to ensure colors look gorgeous, not garish.

COMPLEMENTARY COLORS

When selecting a scheme, you need one predominant color, and up to three others for doors and trim. An easy way to pick these accent colors? Go a shade darker or lighter than your main hue.

COLOR OPTIONS

Standard Colors

Deluxe Colors

*Not available in Composite 365

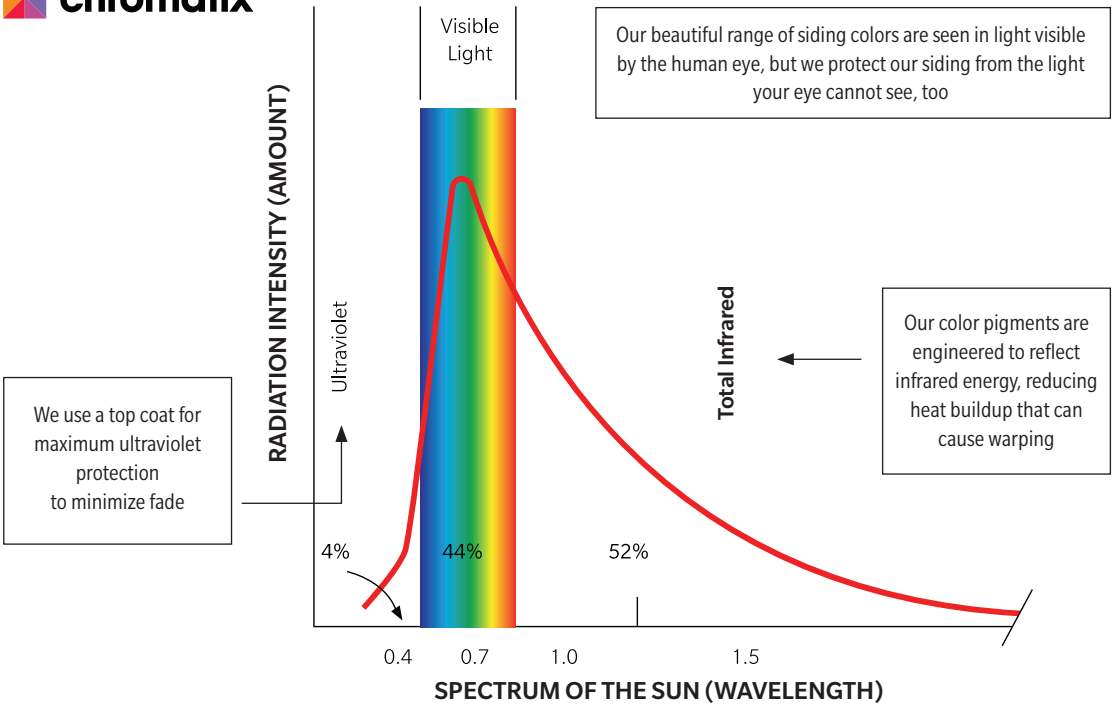

Color renditions are for comparison only. Some colors may not be available in all siding types or styles and locations. Please see your Champion Representative for actual color chip samples and availability.

CHROMATIX™ TECHNOLOGY

We engineer our products to protect them from damaging light rays, which can cause fading, chipping, and cracking. We protect our siding from ultraviolet (UV) light, which can fade siding color, and from infrared energy, which can warp or distort siding. This Chromatix™ color-preservation technology allows us to offer our exclusive Limited Lifetime Warranty† against fading.

THE SCIENCE OF COLOR PRESERVATION

AFTER

“New Champion siding was the easiest solution for our home. We now have better insulation and avoided painting.”

—Christina S., Cincinnati, OH
